SCOPE (SCHOOL OF COMPUTER SCIENCE AND ENGINEERING)

About School

The Department of Computer Science and Engineering was established in 2017 and became the School of Computer Science and Engineering (SCOPE) in January 2019. At present, the School is headed by Dr. CH. Pradeep Reddy. The School has qualified and committed faculty members who offer impressive instruction in a variety of modes, exploring experiential learning approaches and new pedagogical methods in order to provide proper learning to students. The school provides the necessary infrastructure, hardware, and software to support the faculty for their continuous learning and research.

The scope includes various programs -
for all the undergraduate programs, the eligibility is same -
Eligibility

Nationality

- The applicant should be a Resident / Non-Resident Indian National / PIO / OCI.
- NRI applicants can directly apply under 'NRI Category' through the NRI application form.
- Foreign applicants who have studied/are studying abroad can apply directly through the International application form.
- Visit https://vit.ac.in/admissions/international/overview to know more.

Age Limit

- Applicants whose date of birth falls on or after 1st July 2002 are eligible to apply for admission into Engineering in the academic year 2024.
- The date of birth as recorded in the High School / SSC / X Certificate will be considered authentic.
- Applicants should produce this certificate in original as a proof of their age at the time of counselling/admission, failing which their candidacy for admission will be cancelled.

UNDERGRADUATE PROGRAMS

CSE

About the Programme

The Computer Science and Engineering programme at VIT-AP is a unique blend of hardware and software, allowing students to gain knowledge about the concepts that enable many of today's fundamental technologies, including Wireless Communication and the Internet of Things.

Key Features

One of the largest departments in terms of number of faculty and students.

Best-in-class infrastructure and faculty profile.

Curriculum is designed to facilitate students to pursue higher education in India as well as abroad.

Career Prospects

After the successful completion of B.Tech. in Computer Science and Engineering, students can either opt for higher studies and carry out research or get a job.

In today's world, a career in the IT industry is considered to be lucrative, because of its high paid jobs, and challenging, as it offers a competitive environment for career advancement. There are ample opportunities in the areas of database management, data analytics, embedded systems, IoT, computer hardware/software implementation and maintenance, gaming, web designing, and other related domains.

Students can work in various sectors, both public and private, as programmers, software developers, data analysts, software and system engineers, system analysts, web designers, website developers, mobile application developers, etc. to name a few.

Design Your Own Degree (DYOD)

- Students are given options to select either a Specialization or a Minor along with their choice of B.Tech. Major during counselling.
- A student is allowed to change his/her choice of Specialization or Minor after the completion of their first year in the University as per their evolving interests.
- A student can also choose to do a Double Major instead of a Specialization or a Minor when they start their second year.

Media and Communication

Program Outcomes

After successful completion of the program a student is expected to have abilities to

PO1. Engineering knowledge:

Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Problem analysis:

Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design/development of solutions:

Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Conduct investigations of complex problems:

Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Modern tool usage:

Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations

PO6. The engineer and society:

Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues, and the consequent responsibilities relevant to the professional engineering practice.

PO7. Environment and sustainability:

Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Ethics:

Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Individual and teamwork:

Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communication:

Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Project management and finance:

Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Life-long learning:

Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Programme Educational Objectives

- To prepare students with good scientific and engineering knowledge to analyse, design, and create products, and to provide solutions to problems in Computer Science and Engineering.
- To inculcate in students professional approach, effective communication skills, teamwork, multidisciplinary approach, and an ability to relate engineering issues to broader social. context and to acquire professional excellence in national and multinational organizations.
- To make students aware of excellence, leadership, code of ethics, guidelines, and lifelong learning needed for successful professional career by providing them with an excellent academic environment.
- To provide engineering insights into problem solving to succeed in technical professions through precise education and to prepare the students to excel in Master's programmes and research.

Programme Specific Outcome

- To apply basic principles and practices of computing grounded in mathematics and science to successfully develop solutions to real-world problems in Computer Science and Engineering within software related projects as per the appropriate software life cycle models and to meet customer business objective(s).
- To demonstrate an ability to use techniques, skills, and modern computing tools to implement and organize computing works under given constraints using parallel computing, cloud computing, and other allied areas.

- To exhibit knowledge of current pedagogical techniques, contemporary trends in technology, and hands-on laboratory experiences as received from the academic experience here and/or productively engage in research.

CSE – AIML

About the Programme

The School of Computer Science and Engineering offers a B.Tech programme in Computer Science and Engineering with specialization in Artificial Intelligence and Machine Learning. This programme (using programme for consistency.

Key Features

Well-Designed Curriculum & Course Structure

The curriculum has been designed as per the latest industry demands.

Choice Based Credit System (CBCS)

Students have the option to choose program electives based on their interests.

Academic Flexibility

Students have the option to choose open electives from other domains (other than Computer Science) with the aim to enhance their skills and widen the scope of taking up case studies, projects, assignments, and vocational training including entrepreneurship.

Holistic Development of Students

Technical Clubs like Robotics Club, IEEE Students' chapter, IE(I) and ICEIT chapters, etc., allow the students to learn and update themselves with the latest technologies and showcase their abilities in various fields, outside the scope of their curriculum studies.

Placements

Placement assistance (Mock Drives/Interviews), internships assistance, placement classes by the expert team of Training and Placement.

Career Prospects

Artificial and Machine Learning Computer Engineering applies the principles of Computer Science and mathematical analysis to design, develop, test, and evaluate various automations. The tasks performed by the engineers of this discipline evolve quickly, reflecting on new developments or changes in technology, according to the preferences and practices of the employers.

★ Machine Learning Engineer – Design, develop and implement ML algorithms.

★ Data Engineer – Design and build scalable data processing systems and pipelines.

★ AI Software Engineer – Develop software applications that incorporate AI technologies.

★ AI DevOps Engineer – Manage the deployment, scaling, and maintenance of AI systems.

★ Robotics Engineer – Design and develop intelligent robots and robotic systems.

★ Computer Vision Engineer – Design and develop computer vision systems and applications.

★ Natural Language Processing (NLP) Engineer – Design and develop NLP systems and applications.

★ AI Solutions Architect – Design and build end-to-end AI solutions for clients.

The 4-year degree programme will nurture and transform the students into highly skilled professionals to land a high paying AI-ML jobs in various National & International Platforms.

CSE-BLOCKCHAIN

About the Programme

The School of Computer Science and Engineering offers a B.Tech. programme in Computer Science and Engineering with specialization in Blockchain Technology. This programme aims to provide students with a solid foundation in the principles and techniques of blockchain technology, as well as hands-on experience in applying these technologies to real-world problems. Blockchain is a distributed, immutable digital ledger idea or protocol that is attracting a lot of corporate, industrial, and other real-time use cases that require tracking and recording transactions. The industry and research groups are now concentrating on this futuristic technology. To impart thorough understanding in the blockchain ecosystem, the department offers a B.Tech. in CSE with a specialisation in Blockchain Technology. This student body is strengthened with the qualities required by the industry to handle complicated difficulties with blockchain technology.

Key Features

Well-Designed Curriculum & Course Structure

The curriculum has been designed as per the latest industry demands.

Choice Based Credit System (CBCS)

Students have the option to choose program electives based on their interests.

Academic Flexibility

Students have the option to choose open electives from other domains (other than Computer Science) with the aim to enhance their skills and widen the scope of taking up case studies, projects, assignments, and vocational training including entrepreneurship.

Holistic Development of Students

Technical Clubs like Robotics Club, IEEE Students' chapter, IE(I) and ICEIT chapters, etc., allow the students to learn and update themselves with the latest technologies and showcase their abilities in various fields, outside the scope of their curriculum studies.

Placements

Placement assistance (Mock Drives/Interviews), internships assistance, placement classes by the expert team of Training and Placement.

Career Prospects

1. Blockchain Developer

2. Bitcoin Cryptocurrency Developer

3. Blockchain Software Engineer

4. Blockchain Principal Program Manager

5. Business Analytics Associate

6. Application Consultant: Blockchain

7. Application Architect: Blockchain

8. Blockchain Project Manager

9. Blockchain Quality Engineer

Blockchain Developer : Blockchain Developers with the expertise to help companies explore Blockchain platforms are in high demand. Blockchain development might be the most marketable career path today because people are eager to realize all the benefits of Blockchain. These individuals require absolute attention to details as theirs is a high ranking position. Blockchain Developers are programmers who create applications for Blockchain. They typically have a lot of experience working with C++, Python, and Javascript before becoming Blockchain developers.

Blockchain Solution Architect: A Blockchain Solution Architect has the responsibility of designing, assigning, and connecting Blockchain solution components with the team of experts such as developers, network administrators, UX designers, and experts of IT Operations whose task is to develop the Blockchain solutions.

Blockchain Project Manager: This individual is entrusted with the responsibility of connecting Blockchain projects with experts whose duty it is to develop Blockchain solutions. Blockchain project managers need to be equipped with the skills of a traditional (cloud) project manager. They also need to master the technical bit to understand the technology thoroughly. Another important ability is excellent communication skills, which is essential when addressing non-technical workers, when providing useful updates, or when trying to get resources from higher authorities.

Blockchain UX Designer: With the incorporation of Blockchain into so many industries, its design as well as user interface, is becoming critical. The role of a Blockchain Designer is shaping a user interface that creates trust and is alluring to a regular user. These individuals need to be able to pay attention to details, have an artistic touch, and most importantly they have to be hardworking as their line of work requires them to spend countless hours behind their computers.

Blockchain Quality Engineer: In any development environment, we have a Quality Assurance Engineer who tests and ensures that all areas of the project are of the required quality. In the Blockchain world, a Blockchain engineer plays a similar role by guaranteeing that all operations are excellent in the Blockchain development environment. In other words, they conduct the testing and automation of frameworks for Blockchain. These individuals need to have a third eye as far as attention to details is concerned because a small mistake on their part affects everyone using their technology. Excellent communication skills would also go a long way in maintaining good work relationships.

Blockchain Legal Consultant: Of course, as organizations try to comprehend the adoption of Blockchain into their systems, legal issues always arise. As companies launch this new technology, they are also looking for legal expertise on what considerations to make while investing. They are curious about the implications of their actions, about how to handle their finances, and lastly, how

to manage their identity. Of course, for such an individual, proper communication skills are mandatory. You also need to have a good grasp of International Law as Blockchain is technology without borders. For the same reason, it is advisable that such people master as many universal languages as they can.

CSE-CYBERSECURITY

About the Programme

The School of Computer Science and Engineering offers a B. Tech programme in Computer Science and Engineering with specialization in Cyber Security Aiming to shape students into well-prepared cyber security professionals, this Computer Science – Cyber Security Programme has been thoughtfully designed to incorporate theoretical and practical elements, analytical and architectural methods, as well as academic research and industry best practices.

Eligibility

Nationality

- The applicant should be a Resident / Non-Resident Indian National / PIO / OCI.
- NRI applicants can directly apply under 'NRI Category' through the NRI application form.
- Foreign applicants who have studied/are studying abroad can apply directly through the International application form.
- Visit https://vit.ac.in/admissions/international/overview to know more.

Age Limit

- Applicants whose date of birth falls on or after 1st July 2002 are eligible to apply for admission into Engineering in the academic year 2024.
- The date of birth as recorded in the High School / SSC / X Certificate will be considered authentic.
- Applicants should produce this certificate in original as a proof of their age at the time of counselling/admission, failing which their candidacy for admission will be cancelled.

Key Features

- **Coverage from external threats**
- **Defence against internal threats**
- **Regulatory compliance for security**
- **Cloud-based security services**
- **Threat detection, prevention, and response**
- **Consolidated solutions**

- **Proper security analytics**

Career Prospects

- More than 1 million cyber security jobs will be available by 2023, but less than 400,000 cyber security professionals will be trained by then. Cyber security is an ever-growing industry. It is projected to grow by 11% in 2023 and by 20% in 2025. This is a fast-paced career with a median salary of $81,000.

Specialization

- Artificial Intelligence and Machine Learning
- Cyber Security
- Edge Computing
- Software Engineering
- Geo Informatics
- Blockchain

Minors

- Economics
- Digital Humanities
- Media and Communication

Programme Educational Objectives

- Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.

- Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
- Graduates will function in their profession with social awareness and responsibility.
- Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
- Graduates will be successful in pursuing higher studies in engineering or management.
- Graduates will pursue career paths in teaching or research

Programme Specific Outcome

- Learn everything you can about the ever-changing computer security landscape, including the software and hardware that are susceptible to cyber attacks. Acquire the knowledge and abilities necessary to foresee potential problems, come up with solutions, and persuade others of your ideas.
- Learn and show that you can use industry-standard software, processes, and hardware to investigate, plan, create, and execute cutting-edge Cyber Security solutions; all the while keeping sensitive information safe for individuals, organisations, and government agencies.

CSE – DATA ANALYTICS

About the Programme

The School of Computer Science and Engineering offers a B. Tech programme in Computer Science and Engineering with specialization in Data Analytics course provides an in-depth knowledge of various Data Analytics skills, e.g. mathematical reasoning, statistical skills, machine learning skills, programming skills, knowledge discovery skills, business intelligence, data mining & data warehousing skills and data visualization skills. With data size increasing in most companies, deserving candidates in this domain have a huge requirement. This course is offered to equip students with knowledge and skills in cutting-edge technologies that are embraced by industries. The students are trained in data management, data mining, storage technologies, predictive analytics, machine learning, and deep learning to hone their skillset in big data. Students gain knowledge regarding principles, tools and techniques to model various real world problems, analyze them, and discover useful information.

Key Features

Best-in-class infrastructure

Best-in-class infrastructure with high end laboratory systems to cater to the need of software industries.

Curriculum

Curriculum is designed to facilitate the students to pursue higher education in India and abroad.

Comprehensive Knowledge

Comprehensive Knowledge is emphasised through courses like Data Essentials, Business Intelligence, Data Security, Social Network Analysis, Database Administration, and Predictive Analytics.

Career Prospects

Students can either opt for higher studies and carry out research or find a job after the successful completion of B.Tech. in Computer Science and Engineering with Data Analytics Specialization. Data analysts are one of the most sought professionals considering the current trend in software development. The demand for such professionals is very high and the availability is less, making jobs being offered with huge salaries and perks along with promising careers as Data Analyst, Data Engineer, Data Analytics Consultant, Quantitative Analyst to mention a few.

Data Analytics is a futuristic technology that is predicted to rise globally. The North American data analytics market is expected to remain dominant. However, the Asia-Pacific region is evolving at an incredible speed in using data analytics and its capabilities. India is seen as one of the frontrunners in Asia utilizing data analytics methods.

- Prepare students to be aware of excellence, leadership, code of ethics, guidelines, and lifelong learning needed for successful professional career by providing them with an excellent academic environment.
- To achieve professional competency in undertaking industry careers and pursue higher education through innovation and implementation of data analysis strategies based on theoretical principles, ethical considerations, and detailed knowledge of the underlying data.

Programme Specific Outcome

- Select appropriately from a wider range of exploratory and inferential methods for analysing data and interpreting the results contextually.
- execute statistical analyses with professional statistical tools and technologies in Bia Data Analytics.
- Apply Data Science concepts and methods to solve problems in real-world contexts and to communicate these solutions effectively.

CSBS

About the Programme

VIT-AP in collaboration with India's leading Company Tata Consultancy Services (TCS) is offering a four-year specialized B. Tech programme titled "Computer Science and Business Systems". This programme aims to impart knowledge on cutting-edge technologies and business skills with hands-on exposure to make students industry-ready. The curriculum is designed to ensure that students should get better exposure on emerging technologies namely Analytics, Deep learning, Machine Learning, Cloud Computing, and Internet of Things and Design thinking and also to develop an equal interest and appreciation towards humanity, value added science and other interrelated topics.

Key Features

★ **Learning common business principles.**

★ **Strong human ethics and values**

★ **Understanding technology abstraction.**

Career Prospects

The B.Tech Computer Science and Business Systems programme is offered in collaboration with Industry Counterpart – Tata Consultancy Services Ltd. This programme is designed to encompass core Computer Science skills and specific industry requirements. The curriculum includes exclusive courses like Design Thinking, Cognitive Science & Analytics, Usability Design of Software Applications, etc. The students evolve into being industry ready and become software engineers with critical skill set.

- The ability to apply theoretical foundations of Computer Science and problem-solving skills through programming techniques for complex real time problems using appropriate data structures and algorithms.
- The ability to design/develop hardware and software interfaces along with database management to meet the needs of industry.
- The ability to demonstrate personal, organizational, and entrepreneurship skills through critical thinking, to engage themselves in life-long learning by following innovations in business, science, and technology.

CSE SOFTWARE ENGINNEERING

About the Programme

The School of Computer Science and Engineering proudly offers a cutting-edge B. Tech programme in Software Engineering. This programme is designed to equip students with a comprehensive understanding of software development principles, methodologies, and practices to meet the evolving demands of the industry.

Highlights

Core Software Engineering Principles:

The curriculum emphasizes fundamental concepts such as software design, development, testing, and maintenance. Students will gain a solid foundation in programming languages, software architecture, and system analysis.

Specialization Tracks:

The programme offers various specialization tracks, allowing students to tailor their education based on their interests and career goals. Specializations include Software Development, DevOps, Cybersecurity, and more.

Practical Application and Projects:

Students will engage in hands-on projects and laboratory work to apply theoretical knowledge to real-world scenarios. This experiential learning approach ensures that graduates are well-prepared to tackle challenges in the field.

Interdisciplinary Approach:

Acknowledging the interdisciplinary nature of software engineering, the curriculum integrates elements from Computer Science, Mathematics, and Business. This ensures that graduates possess a holistic skill set suitable for diverse industry requirements.

Research Opportunities:

The programme encourages participation in research projects, fostering collaboration not only within the department, but also with other departments and external institutions. Students have the chance to explore emerging trends and contribute to the advancement of Software Engineering.

Advanced Curriculum forged by Industry and International Collaborations:

Advanced Curriculum forged by Industry and International Collaborations

Outstanding Placements:

Outstanding Placements

Core Focus Areas

Software Development Lifecycle:

Understanding the end-to-end process of software development, including requirements gathering, design, coding, testing, and maintenance.

Agile and DevOps Practices:

Emphasizing modern methodologies such as Agile and DevOps to enhance collaboration, efficiency, and continuous improvement in software development.

Software Security:

Addressing cybersecurity concerns through courses dedicated to secure coding practices, threat modeling, and vulnerability assessments.

Database Management:

Providing expertise in designing and managing databases, a crucial aspect of software engineering for data-driven applications.

Key Features

Well-Designed Curriculum & Course Structure

The curriculum has been designed as per the latest industry demands.

Choice Based Credit System (CBCS)

Students have the option to choose programme electives based on their interests.

Academic Flexibility

Students have the option to choose open electives from other domains (other than Computer Science) with the aim to enhance their skills and more scope of taking up case studies, projects, assignments, and vocational training including entrepreneurship.

Holistic Development of Students

Technical Clubs like Robotics Club, IEEE Students' chapter, IE(I) and ICEIT chapters, etc. allow the students to learn and update themselves with the latest technologies and showcase their abilities in various fields, outside their scope of the study.

Placements

Placement assistance (Mock Drives/Interviews), Internship assistance, Placement classes by the expert team of Training and Placement.
